I'm now at the 3 month mark since my revision by Dr. Cornell, and wanted to report back in. I am very pleased with the results of the revision done in June. I am posting some 'before and after' photos to show the improvement.

The first two are the underneath. Then, left and right. Hope they're not too graphic.

The bottom side was a very rough cut originally with one stitch tunnel and some track marks and also remnants of foreskin that were like skin tags. Although hardly anyone ever saw it, I was self conscious of it. As you can see in the photos, Dr. Cornell did a great job in cleaning it up. There was some extra shaft skin removed during the revision, so was tightened a little.

I appreciate the work that Dr. Cornell is doing. I didn't know where to go, or who to ask.
